Meet Patel: I have worked on creating all 4 scenes and all the buttons, text fields, texts and mens on the scene. I also design them, I put them where they are supposed to be displayed and how they are supposed to be displayed. I also worked on the designing the buttons and Casino backgrounds and space backgrounds themes.

Vedant: I have worked the game itself and the functionality of each button and what it does once it gets clicked. I also helped Meet help select the backgrounds. I was also responsible for passing and printing correct inputs and outputs to the scene and in the backend. I was also responsible to play the game again once the user is done playing all the rounds. It will bring back to the main page where a user can decide if he wants to play the game again or exit.

We both have used github to work on our project, that helped us save precious time and avoid confusion. We both are responsible for our comments on what the code is doing.
